

## Cenovnik 2026

### ENDOTOOTH

EndoTooth replicas with detailed root canal anatomy allow training of endodontic procedures and are a practical part of professional hands-on workshops, courses and curricula of several universities.

**1.534,00 (+PDV)**

### CARIESTOOTH

Bio voxel CariesTooth is a Bio voxel native or KaVo dental training system compatible model with simulated caries lesions, dentin core and enamel shell. They can be customized to fit other types of phantom jaws.

**1.357,00 (+PDV)**

### MONOMATERIAL TOOTH FOR PHANTOM HEADS

Basic single-colour teeth compatible with BioVoxel, KaVo, Frasaco, Nissin, and phantom heads/jaws for dental training.

**177,00 (+PDV)**

## MONOMATERIAL TOOTH WITH CAVITIES (BIOVOXEL TYPODONT)

Monomaterial teeth with cavities compatible with Biovoxel Typodont phantom heads/jaws for filling therapy training.

**177,00 (+PDV)**

## Special Models

### OPAQUE ENDOTOOTH WITH OCCLUSAL CARIES

This first molar model with simulated deep occlusal caries at the D4 stage, complete with a realistic endodontic system, including pulp and four canals. Ideal for training in pulp capping, pulpotomy, pulpectomy, or other endodontic procedures. Designed to fit the Biovoxel typodont jaw and P-Occlusal Models.

**1.770,00 (+PDV)**

### RE-ENDOTOOTH 26 (BIOVOXEL TYPODONT)

The Biovoxel Re-EndoTooth is an advanced molar model for re-endo training. The tooth contains a separated instrument in the MB1 canal, an untreated MB2 which can be found 3mm deeper from the common canal course with MB1, an FRC post in the palatal canal, and gutta-percha filling in the D and partially MB canals. The tooth has a composite-filled access cavity. It can be held in hand, in one of the Biovoxel holders or inserted into a Biovoxel Typodont.

**2.006,00 (+PDV)**

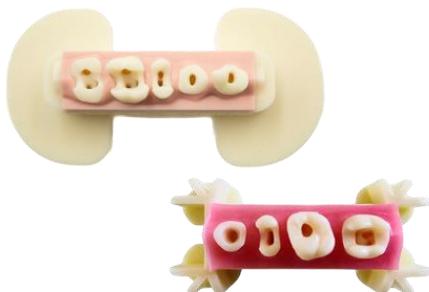

### CARIESSTOOH 46 PRE ENDO (KAVO ANALOG)

Lower molar with simulated mesio-occluso-distal caries at the D4 stage, penetrating into the pulp. The simulated carious matter is differentiated from the pulp by color. The pulp chamber and canal entrances can be cleaned of artificial pulp (see the transparent tooth picture). After removing the carious lesion, a significant amount of tooth structure is missing, making it an ideal model for pre-endo build-up training.

**1.534,00 (+PDV)**

## POST-ENDO MODEL

5 different teeth with different tissue loss. Ideal for FRC post and tooth build up training - perfect for challenging approximal wall restoration. The gum is retractable by cord or teflon. Canals are ended "blindly" - with apical stop, ready for FRC insertion. Can be used together with EndoPan Pro or Tableclamp Basic holders allowing you to position the model at any angle needed, facilitating both direct and indirect work.

**7.080,00 (+PDV)**

## CAVITOOTH

Simple models of distal segment of a lower jaw with simulated cavities. Gingival sulcus allows for a matrix placement. Recommended to be used with BioVoxel's Essential Dental Anatomy Models. 3 versions available with different extent and type of cavities.

**590,00 (+PDV)**

## OCCLUTOOTH

The single unit contains 1x model of distal upper teeth and 1x model of distal lower teeth in real life-size. They serve as a training tool for occlusal anatomy modeling.

**944,00 (+PDV)**

## ESSENTIAL DENTAL ANATOMY MODELS - ENLARGED

The single unit contains 1x enlarged model of upper distal teeth and 1x enlarged model of lower distal teeth. They serve as a helpful distal anatomy learning tool.

**3.540,00 (+PDV)**

## ESSENTIAL DENTAL ANATOMY MODELS - REAL SIZE

The single unit contains 1x real size model of upper distal teeth and 1x real size model of lower distal teeth. They serve as a helpful distal anatomy learning tool.

**1.770,00 (+PDV)**

## BIOVOXEL TYPODONT JAW (WHOLE- UPPER AND LOWER)

The jaw compatible with our Biovoxel phantom head and as well compatible for KaVo, Nissin and Frasaco phantom heads. Real anatomy of roots and alveoli, quick fixing and unfixing of the teeth in the jaw. Price is for the whole jaw (upper and lower).

**23.600,00 (+PDV)**

## BIOVOXEL TYPODONT JAW (UPPER OR LOWER)

The jaw compatible with our Biovoxel phantom head and as well compatible for KaVo, Nissin and Frasaco phantom heads. Real anatomy of roots and alveoli, quick fixing and unfixing of the teeth in the jaw. Price is for the one jaw (upper or lower).

**11.800,00 (+PDV)**

## BIOVOXEL PHANTOM HEAD

The phantom head is freely adjustable, allowing any ergonomic position for the practitioner. It includes a pair of Biovoxel typodont jaws (upper and lower jaw). The head features a soft, replaceable silicone face and can be connected to a suction system.

**96.760,00 (+PDV)**

## SURGICAL TRAINING JAW MODEL

Features 4 Realistic Defect Sites:

- Posterior gap at teeth #15–16, with sinus located just 3–4 mm above
- Horizontal frontal bone defect at tooth #11
- Combined horizontal and vertical defect at teeth #23–24

Unilateral shortened dental arch with horizontal concavity and vertical defect (distal to the second quadrant; sinus proximity: ~6–8 mm)

**3.540,00 (+PDV)**

## AUGMENTATION + IMPLANT MANDIBLE MODEL

This mandible features simulated cortical and cancellous bone, plus a mandibular canal - the perfect setup for implant placement and augmentation training.

**7.670,00 (+PDV)**

## ENDO ORGANIZER

Practical Endo Organizer. Includes endo sponge with endo ruler, cone organizer, and notches for loading MTA or similar material onto the tool.  
\*Only for training purposes.

**3.540,00 (+PDV)**

## ENDOPAN BASIC

Practical and simple table holder for fixing any training tooth. Fixes the tooth firmly, allows connection of the apexlocator, includes a collection container for the rinsing solution.

**6.490,00 (+PDV)**

## ENDOPAN PRO

The EndoPan Pro is advanced version of our EndoPan Basic. It has all its functionalities; it is bigger and allows you to fix the tooth in various angles. You can work in direct view, indirect view or position the tooth in any angle needed. The end clamp for holding the tooth can be unscrewed and swapped for Bio voxel Typodont Jaw model.

**12.980,00 (+PDV)**

## TABLECLAMP BASIC

The TableClamp Basic is a practical table holder which allows you to fix the tooth in various angles. The end clamp for holding the tooth can be unscrewed and swapped for Bio voxel Typodont Jaw model.

**7.080,00 (+PDV)**

## MANDIBULAR ANESTHESIA MODEL

Mandible for mandibular anesthesia training. Practice your inferior alveolar nerve block and local or intraligamentary anesthesia techniques.

**18.880,00 (+PDV)**

## TRANSPARENT MANDIBLE

A beautiful model of transparent mandible with visualized positions of the neurovascular bundles - n. mandibularis (alveolaris inferior), n. buccalis, n. lingualis. For teaching, demonstrating anatomy or as a decorative addition to your dental office.

**18.880,00 (+PDV)**

## INNER EAR MODEL

Anatomical model of the inner ear consisting of a model of the cochlea and a transparent model of the semicircular canals with otoconia simulation for maneuver training.

**18.880,00 (+PDV)**

Poštovani,

Za sva pitanja u vezi proizvoda i porudžbine stojimo vam na raspolaganju.

Mišela Kojadinović, dr stom.
